## ICACS21

Cities stand to benefit the most from connecting people, process, data, and things. A Smart City exploits sustainable information and communication technologies to improve quality of life, health, education, and also the performance of urban services for citizens. Knowledge University invites you to submit proposals to ICACS21 to address these issues.

The conference will be held at Knowledge University campus in the city of Erbil, Iraq. However, due to the COVID19 restrictions remote participation via video conferencing is also possible.

Accepted papers will be published in a conference proceeding book with indexing by **ITM Web of Conferences** including **DOI** (Crossref), **Clarivate Analytics** (web of science), **DOAJ**, **ProQuest** and **Google Scholar** and others.

Topics include, but not limited to:

- AI and Machine Learning for secure and sustainable smart cities
- Cloud/edge/fog computing for smart cities
- IoT and Cyber Physical Systems for smart cities
- Secure and Trustworthy Computing for smart cities
- Energy harvesting and sustainability in smart cities
- Cloud/edge/fog computing for smart cities
- Employment of IoT and mobile network technologies in education
- AI enabled IoT education systems
- Machine learning for IoT Systems
- IoT for health care systems
- Sustainable power system based on IoT and AI
- Protocols and algorithms for wireless sensor networks
- Internet of Flying Things
- Unmanned Aerial Vehicles (UAVs) in IoT
- Social media and urban awareness
- Blockchain for IoT networks
- 5G and beyond 5G networks
- Wearable devices for communications and computing
